Restriction to one of the following inventions is required under 35 U.S.C. § 121:

- I. Claims 1-12, drawn to a defrost initiation control system, classified in Class 62, subclass 151.
- II. Claims 13-16, drawn to condenser water pump control, classified in Class 62, subclass 184.
- III. Claims 17, drawn to evaporator fan control, classified in Class 62, subclass 186.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, the invention in Group I as recited in claim 1 has separate utility such as in a system that does not have the water pump control of Group II nor the evaporator fan control of Group III; the invention in Group II as recited in claim 13 has separate utility such as in a system that does not have the defrost mode based upon an algorithm developed to maximize heat transfer of Group I nor the evaporator fan control of Group III; and the invention in Group III as recited in claim 17 has separate utility such as in a system that does not have the defrost mode based upon an algorithm developed to maximize heat transfer of Group I nor the water pump control of Group II. See M.P.E.P. § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and the search for each group is not required for the other groups restriction for examination purposes as indicated is proper.

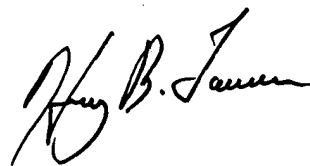

Claims 18-21 will be examined along with whichever group is elected.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed.
